

Heatmap showing the relative strength of 40 genes across 25 cell types. The color scale ranges from 0 (white) to 1 (dark green). A dendrogram on the right shows hierarchical clustering of genes, and a dendrogram on the bottom shows hierarchical clustering of cell types. The cell types are grouped into four main clusters: C15-noSig-B cell, C2-noSig-B cell, C12-noSig-CD4 TCM, and C16-noSig-Monocytes. The genes are grouped into four main clusters: MHC-I, MHC-II, CYP4A, and CYP4B.
